This book is open access under a CC BY-NC-ND 3.0 IGO license. The Early Years analyzes the development of Latin American and Caribbean children and makes a compelling case for government intervention in what is instinctively a family affair. Spending on effective programs for young children is an investment that, if done well, will have very high returns, while failure to implement such programs will lower the returns on the hefty investments being made in primary, secondary, and higher education. Policies for young children belong at the core of a country's development agenda, alongside policies to develop infrastructure and strengthen institutions. However, if the

services provided (or funded) by governments are to benefit children, they must be substantially better than what is currently being delivered in the region. This book offers suggestions for improving public policy in this critical area.

Principal Administrative Associate IBM Redbooks Diversity, inclusion, and equal opportunity are three terms that are often used interchangeably; however, there are some differences in how they are interpreted and applied between the Department of Defense (DOD) and civilian organizations. In the past few decades there have been rapid changes to certain laws and policies regarding diversity, inclusion, and equal opportunity in the Armed Forces. Since 2009, DOD policy changes and congressional actions have allowed individuals who are gay to serve openly with recognition for their same-sex spouses as dependents for the

purpose of military benefits and contend that a more diverse force is a better performing and more efficient force. They opened all combat assignments to women. On June 30, 2016, DOD announced the end of restrictions on service for those transgender troops already openly serving. However, in August of 2017, President Donald J. Trump directed DOD to (1) continue to prohibit new transgender recruits, (2) review policies on existing transgender servicemembers, and (3) restrict spending on surgical procedures related to gender transition. Military manpower requirements derive from National Military Strategy and are determined by the military services based on the workload required to deliver essential capabilities. Some argue that to effectively deliver these capabilities a workforce with a range of backgrounds, skills and knowledge is required. Those who support broader diversity and equal-opportunity initiatives in the military point out that the nature of modern warfare has been shifting, requiring a range of new skills and competencies, and that these skills may be found in a more diverse cross-section of American youth. Some argue that historically underrepresented demographic groups continue to be at a disadvantage within the military and that efforts should be intensified to ensure equal opportunity for individuals in those groups. Some also contend that if the military is to remain competitive with private-sector employers in recruiting a skilled workforce, DOD should offer the same equal-opportunity rights and protections that civilian employees have. Others oppose the expansion of diversity to include non-traditional gender identification because they fear

it would undermine military cohesion and effectiveness, and would not accurately reflect American society as a whole.

The popularity of the Internet and the affordability of IT hardware and software have resulted in an explosion of applications, architectures, and platforms. Workloads have changed. Many applications, including mission-critical ones, are deployed on a variety of platforms, and the System z® design has adapted to this change. It takes into account a wide range of factors, including compatibility and

investment protection, to match the IT requirements of an enterprise. This IBM® Redbooks® publication discusses the IBM zEnterprise System, an IBM scalable mainframe server. IBM is taking a revolutionary approach by integrating separate platforms under the well-proven System z hardware management capabilities, while extending System z qualities of service to those platforms. The zEnterprise System consists of the IBM zEnterprise 114 central processor complex, the IBM zEnterprise Unified Resource Manager, and the IBM zEnterprise BladeCenter® Extension. The z114 is designed with improved scalability, performance, security, resiliency, availability, and virtualization. The z114

provides up to 18% improvement in uniprocessor speed and up to a 12% increase in total system capacity for z/OS®, z/VM®, and Linux on System z over the z10™ Business Class (BC). The zBX infrastructure works with the z114 to enhance System z virtualization and management through an integrated hardware platform that spans mainframe, POWER7™, and System x technologies. The federated capacity from multiple architectures of the zEnterprise System is managed as a single pool of resources, integrating system and workload management across the environment through the Unified Resource Manager. This book provides an overview of the zEnterprise System and its functions, features, and

associated software support. Greater detail is offered in areas relevant to technical planning. This book is intended for systems engineers, consultants, planners, and anyone wanting to understand the zEnterprise System functions and plan for their usage. It is not intended as an introduction to mainframes. Readers are expected to be generally familiar with existing IBM System z technology and terminology.
