What an amazing career. Tom Stafford attained the highest speed ever reached by a test pilot (28,547 mph), carried a cosmonaut's coffin with Soviet Secretary Leonid Brezhnev, led the team that designed the sequence of missions leading to the original lunar landing, and drafted the original specifications for the B-2 stealth bomber on a piece of hotel stationery. But his crowning achievement was surely his role as America's unofficial space ambassador to the Soviet Union during the darkest days of the Cold War. In this lively memoir written with Michael Cassutt, Stafford begins by recounting his early successes as a test pilot, Gemini and Apollo astronaut, and USAF general. As President Nixon's stand-in at the 1971 Soviet funeral for three cosmonauts, he opened the door to the possibility of cooperation in space between Russians and Americans. Stafford's Apollo-Soyuz team was the first group of Americans to work at the cosmonaut training center, and also the first to visit Baikonur, the top-secret Soviet launch center, in 1974. His 17 July 1975 "handshake in space" with Soviet commander Alexei Leonov (who became a lifelong friend) proved to the world that the two opposing countries could indeed work successfully together. Stafford has continued in this leadership role right up to the present, participating in designing and evaluating the Space Shuttle, Mir, and the International Space Station. He is truly an American hero who personifies the broadest spirit of exploration and cooperation.

In *Bitstreams*, Matthew G. Kirschenbaum distills twenty years of thinking about the intersection of digital media, textual studies, and literary archives to argue that bits—the ubiquitous ones and zeros of computing—always depend on the material world that surrounds them to form the bulwark for preserving the future of literary heritage.

To keep the land in the family . . . To operate the land profitably . . . To leave the land better than they found it . . . Each year, Sand County Foundation's prestigious Leopold Conservation Award recognizes families for leadership in voluntary conservation and ethical land management. In *Generations on the Land: A Conservation Legacy*, veteran author and journalist Joe Nick Patoski visits eight of the award-winning

families, presenting warm, heartfelt conversations about the families, their beloved land, and a vision for a healthier world. *Generations on the Land* celebrates these families' roles as conservation leaders for the nation—far beyond the agricultural communities where they live—and reinforces the value of trans-generational family commitment to good land stewardship. The eight landowners profiled by Patoski include six ranchers, a forester, and a vintner. They reside across the country: in California, Nebraska, Texas, Utah, Wisconsin, and Wyoming. Their conservation accomplishments range from providing a habitat corridor for pronghorn antelope to hammering out an endangered species "safe harbor" agreement for grape growers. A short introduction by a fellow conservation or ranching professional precedes each of the personal portraits by Patoski, which are written in an informal, conversational style. Brent Haglund, president of the Sand County Foundation, provides an introduction to the purpose and work of the foundation, and a conclusion summarizes the substantive conservation contributions of the Leopold award winners. With more and more attention being focused on the tensions between the agricultural and economic potential of land and the preservation of the natural environment, a better understanding of sustainable agriculture is becoming increasingly vital. By showcasing the leadership of these Leopold Conservation Award winners, *Generations on the Land* will inspire a whole new cadre of landowners to build a lasting heritage of conservation and sustainable land use—benefitting the earth and its inhabitants for decades to come. Paper used in printing this book was provided by Mixed Sources: materials manufactured under certification by the Forest Stewardship Council. "In 1939, Aldo Leopold wrote 'When land does well for its owner, and the owner does well for his land, when both end up better by reason of this partnership, we have conservation.' *Generations on the Land* demonstrates this simple yet powerful concept through a series of inspirational and instructional essays drawn from hardworking landowners from across the nation. Whether you manage a working landscape yourself, or are one of the urban many seeking insights into how humanity can achieve a sustainable future, you need to study this book."--Richard C. Bartlett, *Thinking Like a Mountain* Foundation

The Audio Expert Circuit Cellar

The FIAF Moving Image Cataloguing Manual is the result of many years of labor and collaboration with numerous professionals in the moving image field. It addresses the changes in information technology that we've seen over the past two decades, and aligns with modern cataloguing and metadata standards and concepts such as FRBR (Functional Requirements for Bibliographic Records), EN 15907, and RDA (Resource Description and Access). The manual is designed to be compatible with a variety of data structures, and provides charts, decision trees, examples, and other tools to help experts and non-experts alike in performing real-world cataloguing of moving image collections.

The Audio Expert is a comprehensive reference that covers all aspects of audio, with many practical, as well as theoretical, explanations. Providing in-depth descriptions of how audio really works, using common sense plain-English explanations and mechanical analogies with minimal math, the book is written for people who want to understand audio at the deepest, most technical level, without needing an engineering degree. It's presented in an easy-to-read, conversational tone, and includes more than 400 figures and photos augmenting the text. The Audio Expert takes the intermediate to advanced recording engineer or audiophile and makes you an expert. The book goes far beyond merely explaining how audio "works." It brings together the concepts of audio, aural perception, musical instrument physics, acoustics, and basic electronics, showing how they're intimately related. Describing in great detail many of the practices and techniques used by recording and mixing engineers, the topics include video production and computers. Rather than merely showing how to use audio devices such as equalizers and compressors, Ethan Winer explains how they work internally, and how they are spec'd and tested. Most explanations are platform-agnostic, applying equally to Windows and Mac operating systems, and to most software and hardware. TheAudioExpertbook.com, the companion website, has audio and video examples to better present complex topics such as vibration and resonance. There are also videos demonstrating editing techniques and audio processing, as well as interviews with skilled musicians demonstrating their instruments and playing techniques.

What happens to a community of oppositional artists

when the purpose and meaning of their opposition are undermined by social transformation? Such was the dilemma facing many underground artists in Eastern Europe following the collapse of state socialism. In *Up from the Underground*, Anna Szemere looks at the underground based on rock music in Hungary, showing how it anticipated, precipitated, and responded to a period of fundamental change. Szemere's work focuses on a community of rock musicians that became popular with Hungary's urban youth culture in the early 1980s--groups with names such as the Committee, Control Group, and the Galloping Coroners. Szemere reveals the activities, discourse, and group life of musicians against the background of shifting institutional contexts. By the mid-1990s the change of regime had altered the cultural dynamics of Hungarian society, leading to a complete realignment of the underground music world. Szemere uses the opportunity presented by these developments to challenge one-dimensional representations of popular culture and transition in the region. She also addresses more general questions about the nature and uses of expressive culture, autonomy, social change, and social reproduction. *Up from the Underground* is an important addition to the scholarship on the cultural dimension of the most profound societal change in Europe since World War II. It also enriches the increasingly global field of cultural sociology and cultural studies by rethinking its central assumptions and theories in the light of Eastern Europe's unique historical and social experience.
