John Golding brings to his writing the sure eye and profound sensitivity of a practicing artist. Perhaps best known for his seminal history of Cubism, Golding has long been regarded as one of the most outstanding art historians and critics of our time. This volume brings together many of his most important essays, and its publication will be celebrated not only by his admirers, but by lovers of art and language everywhere. *Visions of The Modern* covers a vast range of twentieth-century art, from Matisse and Cubism, Dada and Surrealism, to aspects of postwar American art. Some essays have been out of print, while others have appeared in periodicals not easily accessible to the average reader. Taken together, they establish a sustained, deeply

informed account of many of the grandest moments in the art of this century. A much admired painter, Golding's unique balance of eye and mind infuses his exceedingly literate criticism. Combining a meticulousness in matters of fact with a capacity to write in a lucid, jargon-free manner, he addresses equally the sophisticated art historian, the cultural historian, and the general reader. An appendix to the volume is in the form of a dialogue between Golding and the philosopher Richard Wollheim. It provides additional insights into the origins and aims of abstract art, as well as revealing the mind of an invigorating artist at work.

Health Information Technology Basics gives your students an introduction to the fundamental concepts of the health information technology profession. Perfect for introductory courses where core material in the health information profession is being introduced, this book is written for associate degree level HIT programs at technical, community, or career colleges. The text begins with an introduction to the U.S. health care system and explores career opportunities within the health information profession. The health record is dissected and its many components are carefully reviewed. The book also examines various formats of the medical record and analyzes the advantage and disadvantages of the EHR. Finally, the text covers medical terminologies and classification systems and outlines the basics of reimbursement systems. Features: Each chapter begins with learning objectives and key terms to give the reader a synopsis of what he/she should expect to learn. Additional resources are listed at the end of each chapter for further exploration of the information covered in the chapter. A glossary is included for quick reference of main terms presented throughout the text. An accompanying Instructor 's Manual provides review exercises which recap the important points as well as lab assignments that allow students to apply the information in a practical setting.
